DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, drawn to an inventory access system comprising translated instructions, classified in class 705, subclass 500.
 - II. Claims 5-27, drawn to a method of receiving and matching speech signals, classified in class 704, subclass 231.
 - III. Claims 28-48, drawn to a system comprising inventory transaction selection, classified in class 705, subclass 28.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and III are to Invention II as process and apparatus for its practice.

The inventions are distinct if it can be shown that *either*: (1) the process as claimed can be practiced by another, materially different apparatus, or by hand, *or* (2) the apparatus as claimed can be used to practice another, materially different process. (MPEP § 806.05(e)). In this case, the apparatus as claimed can be used to practice another, materially different process, such as matching speech signals.

Invention I is related to Invention III as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In this case, Invention I has separate utility from Invention III, such as communicating and accessing translated instructions.

Art Unit: 3627

Invention III has separate utility such as selecting items from inventory and receiving confirmation of the selection. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement, to be complete, *must* include an election of the invention to be examined, even if the requirement be traversed (37 CFR 1.143).
